

# The RBI Insights Platform: better health outcomes

The RBI Insights Platform is a healthcare data management and analytics solution, designed by healthcare professionals to assist health plans and health systems organize, simplify, and enrich datasets that inform powerful analytics resulting in better healthcare outcomes.

The platform leverages best-in-class cloud technologies that breaks down silos, lowers the total cost of ownership, and offers unmatched scalability and flexibility. The Platform's Unified Data Foundation improves healthcare data quality by creating a longitudinal record for every member using data from claims, pharmacy, labs, EHR's, SDOH and other external sources. Combined with analytics output from Johns Hopkins ACG, CMS HCC, and CDPS+Rx, RBI Insights provides a unique, fully integrated view of your populations for analysis at the member, provider, provider group and plan level.

RBI Insights' data management services and platform flexibility, allows you to build rich analytic capabilities that accomplish your long-term business strategies, run cohort analyses, and support internal care management initiatives.
